Preface

This report is the result of technical assistance provided by the Economic Modernization through Efficient Reforms and Governance Enhancement (EMERGE) Activity, under contract with the CARANA Corporation, Nathan Associates Inc. and The Peoples Group (TRG) to the United States Agency for International Development, Manila, Philippines (USAID/Philippines) (Contract No. AFP-I-00-00-03-00020 Delivery Order 800). The EMERGE Activity is intended to contribute towards the Government of the Republic of the Philippines (GRP) Medium Term Philippine Development Plan (MTPDP) and USAID/Philippines' Strategic Objective 2, "Investment Climate Less Constrained by Corruption and Poor Governance." The purpose of the activity is to provide technical assistance to support economic policy reforms that will cause sustainable economic growth and enhance the competitiveness of the Philippine economy by augmenting the efforts of Philippine pro-reform partners and stakeholders.

Aware that the administration of Sanitary and Phytosanitary (SPS) regulations in the Department of Agriculture (DA) is characterized by several dysfunctions at the legal, organizational and procedural levels, DA Undersecretary Segfredo Serrano requested technical assistance (TA) from USAID's Economic Modernization through Efficient Reforms and Governance Enhancement (EMERGE) Project to help streamline DA SPS administration. In response, EMERGE commissioned Cesar Virata and Associates (CVAI) to mobilize a team of six experts, one each in agricultural policy, legislative matters, organizational development, systems, institutional reform, and communication (Ms. Beulah de la Pena, Atty. Elizabeth Macaibay, Ms. Irene Villapando, Mr. Gerry Gazmen, Ms. Marinella Castillo and Mr. Benedicto Rayco), to provide the TA.

The Project Team was tasked to work with an interagency SPS Task Force consisting of selected DA officials on the diagnostics module of the TA. This module has the following outputs: 1) A Report on SPS Regulations and their Importance to Trade, 2) A Report on The Legal Parameters in the Administration of SPS Systems, 3) A Report on The Organizational System for Sanitary and Phytosanitary Administration, 4) A Report on The Business Processes in SPS, 5) A Report on Change Management, and 6) a summary, Integrative Report. (The DA has requested that the Report on Change Management not be distributed or released to the public.)

The views expressed and opinions contained in this publication are those of the authors and are not necessarily those of USAID, the GRP, EMERGE or the authors' parent organization.

Sanitary and Phyto-Sanitary Regulations: Importance to Trade¹

Background

Sanitary and Phyto-sanitary (SPS) measures are various regulations imposed by government or applied by industries to (a) ensure that food is safe and/or (b) protect plant and animal health. Because ensuring food safety and protecting animal and plant health are such vital concerns, all agricultural and food products – raw and processed – are subject to one kind of SPS measure or another. These measures may include prescribed product standards, labeling and packaging requirements, quarantine treatment, processing and production standards, and testing, inspection, certification and approval procedures. Quarantine regulation, or those governing the transport of agricultural goods, are the most recognized, and often taken to mean all, of these measures.

SPS measures have major impacts on trade, both negative and positive. Although at the outset they restrict trade, the economic benefits they bring are maximized if they effectively prevent the entry and spread of plant and animal pests and diseases and food toxins, while at the same time remaining facilitative of trade. Consequently, the Medium Term Philippine Development Plan (MTPDP) for 2005 to 2010 seeks to promote a rationalized, modern and harmonized quarantine or SPS system with the dual functions of border protection and trade/export facilitation.

At the Department of Agriculture (DA), SPS measures are implemented by a host of agencies. The most involved of its units are in the Bureaus of Plant Industry (BPI), Animal Industry (BAI), Fisheries and Aquatic Resources (BFAR), and Agriculture and Fisheries Product Standards (BAFPS) as well as the National Meat Inspection Service (NMIS). Also involved are the Food Development Center (FDC) and units in the various commodity-development agencies – Philippine Coconut Authority (PCA), Sugar Regulatory Administration (SRA), National Food Authority (NFA), Fiber Industry and Development Authority (FIDA), National Tobacco Administration (NTA), Cotton Development Authority (CDA), and Fertilizer and Pesticide Authority (FPA). The Bureau of Food and Drug (BFAD) of the Department of Health (DOH) and the Bureau of Product Standards (BPS) of the Department of Trade and Industry (DTI) also implement SPS measures.

In view of the MTPDP 2005-2010 objective of promoting a rationalized, modern and harmonized SPS system, the DA is reforming its SPS administration system. It has asked the international donor community for technical assistance in doing so. The United States Agency for International Development (USAID), through its Economic Modernization through Efficient Reforms and Governance Enhancement (EMERGE) Project, has responded and commissioned Cesar Virata and Associates, Inc. (CVAI) to conduct a diagnosis of the current state of DA SPS administration, in the process identifying its strengths and weaknesses from the legal, procedural, technical, and

¹ Prepared by Beulah de la Pena with the research assistance of Farah Galvez for Cesar Virata and Associates, Inc. (CVAI) under the Project Technical Assistance on Streamlining DA SPS Administration.

organizational viewpoints. This diagnosis would be the basis for the nature of further USAID assistance in the DA's effort to reform its SPS system. This report is one of five that make up such a diagnosis.

Objectives of the Study

Given the range of measures implemented, commodities covered, and agencies involved, some focusing on the most important SPS measures would be helpful. One way of focusing is to concentrate on the measures most relevant to the most traded commodities. Knowing the measures that are most used in trading will direct the diagnosis and reform efforts towards the most functional.

This study looks at the trade relevance of the various DA SPS measures by mapping the same against Philippine import and export data over the past 10 years. The pattern of Philippine agricultural trade by commodity, direction in the case of exports, origin in the case of imports, and value from 1995 to 2004 is examined. The information by traded commodity is then mapped, both to available data on applicable SPS measures that are enforced in the Philippines for both imports and exports, and to measures enforced in other countries for selected exports.

The study is limited to SPS measures applicable to plant and animal products and does not include SPS measures on fishery products. Following agreement with the DA, the Bureau of Fisheries and Aquatic Resources is excluded from the scope of this diagnostic activity because the said bureau will receive assistance on the same matter from another interested international donor agency.

Methodology and Sources of Data

Trade value data for plant and animal commodities, classified by 6-digit PSCC code and by import origin/export destination, from 1995 to 2004 were used and analyzed to identify important SPS measures. Data were obtained from the DA Bureau of Agricultural Statistics (BAS) which sourced its primary data from the National Statistical Office (NSO).

Data is summarized by code and by year across all sources and destinations. For the study period, importation was observed for 1,394 agricultural commodity codes and exportation was recorded for 1,036 commodity codes. Excluding fish, fertilizer, and machinery products, some 1,153 commodity codes with imports and 823 commodity codes with exports became the initial subjects of this study.

DA SPS measures, handled by the BAI, NMIS, BPI, BAFPS, and FDC, were mapped against the commodity codes. The list of SPS measures was sourced from the DA SPS Information System and DA website. The concerned DA agencies updated this list of measures and validated the initial matching with the commodity codes conducted by the study.

To identify the more important SPS measures for Philippine exports, known SPS measures in the export markets (countries) were mapped against a sample of exported commodities chosen purposively from:

- DA priority commodities
- Commodities with small 2004 trade value but with virtually no trade before 2000
- Commodities with medium trade value but with high growth rate from 2000

Overview of SPS Measures

The bulk of the SPS measures implemented by the agencies covered by this study are quarantine measures or measures pertaining to the transport of plant and animal products. These measures, which are directed at preventing the entry and spread of pests and diseases, include bans on imports or transport of commodities from areas known to have pest and disease incidence, and inspection and holding of products at the ports of entry for detection of pests and diseases. They also include treatment prior to transport to eliminate pests and import and transport clearance procedures.

Most of the other measures pertain to product standards. Aimed mostly at ensuring food safety or improving acceptability among consumers, these standards are mostly recommended but not strictly enforced. The BAFPS develops product standards but does not have mechanisms for implementing them. It also participates in the CODEX process of developing international standards for food products, which countries are enjoined, but not required, to adopt. When required by trading partners as condition for imports, product standards are sometimes imposed through the accreditation or recognition by the importing country of a quality-certifying agency in exporting country. The FDC is a recognized certifying agency for certain Philippine food products going to the US and Australia. This means that FDC certification facilitates the entry of certain Philippine product exports into these markets. Meanwhile, although the BPI's National Pesticide Analytical Laboratory (NPAL) does not develop standards and is not an accredited certifying agency, many exporters of fresh fruit and vegetable products voluntarily go through it for the assessment of the pesticide residues and thus reduce the risk of rejection by the importing countries at their ports of entry.

The lists of the various SPS measures on imports and exports by product group are shown in Annex Tables 1 to 5. It ought to be noted that the BPI implements an international guideline on the use of wood packaging materials in international trade. Thus it has the mandate to regulate the packaging of all imports, agriculture or not, if these are in wood, easily making this SPS measure the most trade important. Since this SPS measures involves more than agriculture imports, it is excluded in the following analyses of imports subject to BPI regulation.

Overview of Agricultural Trade

The CIF value of agricultural imports, at current prices, amounted to 3,652 million dollars in 2004 and 32,291 million dollars over the period 1995 to 2004. At constant 1995 prices, these imports grew at a compounded annual average of 1.50% from 1995 to 1998, 0.42% from 1998 to 2001 and 5.92% from 2001 to 2004.

Table 1
Value and Growth of Agricultural Imports and Exports
1995 - 2004

	Imports	Exports
Value (000 \$ current prices)		
2004	3,652,605	3,060,231
1995 - 2004	32,291,235	21,825,582
Growth Rate (% using constant 1995 values)		
1995 -98	1.50	-8.17
1998-01	0.42	-5.40
2001-04	5.92	18.59

Agricultural exports, at constant 1995 prices, declined at the compounded rate of 8.17% and 5.40% annually over the periods 1995 to 1998 and 1998 to 2001, respectively; but grew by an impressive 18.59% per year from 2001 to 2004. The freight-on-board (FOB) value of exports, at current prices, amounted to 3,060 million dollars in 2004 and totaled some 21,825 million dollars over the period 1995 to 2004.

By product group, the biggest imports are cereals and cereal preparations, which accounted for 24% of total; dairy products, 12% of total; and feeding stuff for animals including unmilled cereals, 10%. The fastest-growing imports are fixed vegetable oils and fats, meat and meat preparations, and miscellaneous edible products. In terms of specific commodity code, the biggest imports are other unmilled wheat (including spelt) & meslin; semi or wholly milled rice; oil-cake & other solid residues from the extraction of oil from soya beans; and milk in solid form with fat not exceeding 1.5%. The imports statistics over the 10-year period by product group and commodity code are shown in Annex Tables 6 - 9.

The top ten country sources of agricultural imports are the US, China, Australia, Thailand, New Zealand, India, Vietnam, Canada, Singapore and Indonesia. Australia is the major source of live animals other than fish; India, of meat and meat preparations; New Zealand, of dairy products; the US and Vietnam, of cereals and cereal preparations; Thailand, of sugar and sugar products; Indonesia, of coffee, tea and spices; and the US, of feeding stuff for animals. The fastest growing import sources, supplying at least 1% of Philippine agricultural imports from 1995 to 2004, are Argentina, Brazil, Malaysia, Vietnam, Indonesia, and Thailand. The imports data by origin are shown in Annex Tables 10-12.

The bulk of Philippine exports are vegetables and fruits, accounting for 30% of total; fixed vegetable oils and fats, 25%; and fish and aquatic products, 19% of total. The fastest growing exports are meat and meat preparations; tobacco and tobacco

manufactures; raw hides, skins and furskins; and dairy products and birds eggs. More specifically, the biggest exports are crude coconut oil; fresh bananas (including plantains); frozen shrimps & prawns; refined coconut oil; prepared pineapple not containing sugar or sweetening; desiccated coconut; and centrifugal sugar. The exports statistics by product group and commodity code are shown in Annex Tables 13 - 16.

The top ten export destinations for Philippine agriculture are the US, Japan, the Netherlands, South Korea, Hongkong, Taiwan, Indonesia, the People's Republic of China, Vietnam, and Malaysia. Among export destinations absorbing at least 1% share of Philippine agriculture exports, Vietnam, Thailand, the United Kingdom, South Korea, and Indonesia show the fastest growths. Japan is the major market for fish and fruits and vegetables while the US is the biggest market for fixed vegetable oils and fats. Annex Tables 17-19 contain export data by destination.

SPS Measures on Imported Commodities

The matching of the SPS measures of BAI, NMIS, BPI, and BAFPS for animals and animal products and plant and plant products with commodity codes are shown in Annex Tables 20 and 21, respectively. Some 702 commodity codes are clearly subject to some form of SPS measure by the above stated agencies of the DA. The import value of these commodities from 1995 to 2004 amounted to 21,366 million dollars or 66% of the total value of agricultural imports in that period. The remaining 34% either do not have SPS measures or are not plant and animal products. The BAI and NMIS have SPS measures on 296 commodities whose imports totaled 9,632 million dollars in 1995 to 2004. The BPI has SPS measures on 432 commodities, the imports of which amounted to 15,009 million dollars during the same period.

Table 2
Imports with SPS Measures, by Agency

Agency	No of Codes	Total Imports \$M 1995-2004	Import Share (%)
BAI/NMIS	296	9,632	30
BPI	432	15,009	47
BAI/NMIS/BPI	702	21,366	66

By product group, the NMIS focuses on meat imports, the BPI focuses on plant imports while the BAI looks at animals, meats, and plant products that are used for feed. Thus, meat imports normally go through both BAI and NMIS while imports of feed materials go through BAI and BPI.

Imports data by SPS measure for animals and plants are shown in Annex Tables 22 and 23. The SPS measures for subject product groups that are associated with the biggest import values are shown in Table 3 below.

Note that there are many existing trade-important SPS measures for animal and animal products and eleven (11) of these measures date prior to 1995, when the importation of most agricultural products was liberalized. There are fewer trade-important SPS measures for plants and plant products but two of these are general policies or guidelines that date prior to 1995. One important general guideline on the importation of plants and plant products was issued in year 2000.

Excluding fish, fertilizer, and agricultural machinery products², some 412 commodity codes, whose imports amounted to 6,210 million dollars from 1995 to 2004, or 20% of agricultural imports in the period, are not subject to SPS measures by the BAI, BPI, NMIS or BAFPS. These products, with import data, are listed in Annex Table 24. The commodity codes with the biggest imports are:

Most of the agricultural products not subject to DA SPS measures are processed foods for which safety issues are under the oversight of the BFAD. Annex Table 25 provides a list of the SPS measures implemented by BFAD.

² These products, comprising 14% of imports are excluded from the SPS coverage of agencies included in this study.

SPS Measures on Exported Commodities

DA SPS measures supporting agricultural exports of plant, animal, and processed food products are implemented through the BAI, NMIS, BPI, BAFPS and FDC. The matching of these SPS measures with commodity codes is shown in Annex Tables 26 - 28. A total of 765 exported commodities are supported with SPS measures of the above agencies. These commodities had total exports worth 16,435 million dollars from 1995 to 2004 or 75% of agricultural exports.

Exports data by SPS measure for animals, plants, and processed foods are shown in Annex Tables 29 - 31. The SPS measures associated with the biggest export values are shown in Table 5 below. The data shows that the important measures for animal and animal products affect a smaller share of total exports compared to the important measures for plant and plant products. For both product groups, the relatively most important measures were issued prior to 1995.

Excluding fish, fertilizer, and agricultural machinery products, a total of 37 commodity codes are not subject to SPS export support measures by BAI, BPI, NMIS, BAFPS or FDC. These commodities, listed in Annex Table 32, had total exports amounting to 270 million dollars from 1995 to 2004, or 1.2% of agricultural exports in the period. The commodities without SPS export support measures are all crude animal and vegetable materials.

However, the total export values of exported commodities with and without SPS support measures are misleading because many measures for exports are really country-specific. The support measures for plant and processed food exports, for example, are mostly for those destined to the US, Japan, Australia, and ASEAN countries. More specifically, the FDC's SPS support for exported food products is limited to those bound for the US, Australia, and Japan. The processed food exports to these countries; or those that could have been covered by BFAD support; had a total value of 535 million dollars in 2004 or a mere 6% of global exports of the same commodities.

Philippine exports are mostly directed at countries that subscribe to international SPS protocols or guidelines. For a sample of 19 exported commodities, some 98% of export value in 2004 went to countries which are known to subscribe to some international SPS standard or guideline -- such as the CODEX for processed food, the OIE for animal and meat, the IPPC for plant and plant products, the FAO and ASEAN Agreements -- as minimum. Access to domestic import regulations of trading partners does not seem an issue as only about 3% of exports of sample commodities went to countries with publicized domestic SPS regulations. By commodity, substantially greater proportions of meat exports go to countries with known international and domestic standards compared to plant products. The exports are shown in annex tables 33 and 34 while the trading partner SPS regulations on the sample commodities are shown in Annex Table 35.
